A scan with invisible text in Helvetica, not embedded

Like an OCR'd scan: a picture of the page, with the words on top in rendering mode 3.

FynePDF bench: scanned page 1 of 3

This page was drawn as a picture of text, the way a phone scanner or an office copier makes a PDF. There is no text in the file, only an image of it.

PDF/A converters must keep the picture as it is, declare what its colours mean, and not change how the page looks.
